DETAILED ACTION

Applicant's response dated 02/23/2006 has been received and entered. Claims 1-18 are remain pending in the application.

Applicant's arguments dated 02/23/2006 in view of the submission of the certified translation of the KR 2003-41330 have been considered but are most in view of the new ground(s) of rejections as follow.

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's admitted prior art (APA), figure 3, in view of Won, US Patent 6,046,785.

Regarding the above claims, APA, figure 3, discloses a liquid crystal display (LCD) apparatus comprising:

- . an LCD panel (300);
- . a driver printed circuit board (PCB 310);
- . a backlight assembly (320);
- . a received container (part between backlight 320 and PCB 310);
- . a digitizer (330).

Application/Control Number: 10/804,991

Art Unit: 2871

APA, figure 3, however, does not disclose first and second protrusion forming on a back side of the received container as well as the driver PCB including third and fourth connection portions corresponding to the first and second connection portions. Won does disclose protrusions can be formed form a mold frame structure (19)(see figure 1 and 2A) and forming connection portions corresponding to PCB connection portion (30) and connected together through a screw/screw hole (through hole over PCB 30). Therefore, it would have been obvious to one skilled in the art at the time of the invention was made to employ the APA's container having protrusions for forming connection portions to support the driver PCB through the PCD connection portions as shown by Won in order to stably ground the PCB.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dung Nguyen whose telephone number is 571-272-2297. The examiner can normally be reached on Tuesday-Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert H. Kim can be reached on 571-272-2293. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
